CONTENTS OF VOLUME 23
NUMBER 1, SEPTEMBER 1972

ALASTAIR N. WORDEN, PETER R. B. NOEL, AND LIONEL E. MAWDESLEY-THOMAS. Effect of Ronnel after Chronic Feeding to Dogs 1

GEORGE C. FULLER, WILLIAM F. BOUSQUET, AND TOM S. MIYA. Effect of Cold Exposure on Drug Action and Hepatic Drug Metabolism in the Rat 10

INSU P. LEE AND ROBERT L. DIXON. Antineoplastic Drug Effects on Spermatogenesis Studied by Velocity Sedimentation Cell Separation 20

ROBERT B. BECKETT, RAUL WEISS, ROBERT E. STITZEL, AND RICHARD J. CENEDELLA. Studies on the Hepatomegaly Caused by the Hypolipidemic Drugs Nafenopin and Clofibrate 42

ERVIN NOVAK, SAMUEL S. STUBBS, ELMER C. SANBORN, AND RICHARD M. EUSTICE. The Tolerance and Safety of Intravenously Administered Benzyl Alcohol in Methylprednisolone Sodium Succinate Formulations in Normal Human Subjects 54

J. C. PEKAS. Intestinal Hydrolysis, Metabolism and Transport of a Pesticidal Carbamate in pH 6.5 Medium 62

FREDERICK W. GRANT AND JAMES GREENE. Phototoxicity and Photonucleophilic Aromatic Substitution in Chlorpromazine 71

R. K. DATTA AND W. ANTOPOL. Inhibitory Effects of Chronic Administration of Morphine on Uridine and Thymidine Incorporating Abilities of Mouse Liver and Brain Subcellular Fractions 75

H. L. MARTIN, R. C. DURANT, W. V. HUDAK, AND S. L. FRIESS. Alterations in Chemical Blockade of Cat Gastrocnemius–Soleus Tissues under Hyperbaric He/O_2 Atmospheres 82

A. WALLACE HAYES. Excretion and Tissue Distribution of Radioactivity from Rubratoxin B-^{14}C in Mice and Rats 91

W. C. ROSE, S. G. BRADLEY, AND I. P. LEE. Potentiation of the Toxicity of Several Antitumour Agents by *Salmonella typhosa* Endotoxin 102

C. L. LITTERST, T. M. FARBER, A. M. BAKER, AND E. J. VAN LOON. Effect of Polychlorinated Biphenyls on Hepatic Microsomal Enzymes in the Rat 112

ROBERT A. NEAL. A Comparison of the *in Vitro* Metabolism of Parthion in the Lung and Liver of the Rabbit 123

JOHN L. EGLE, JR. Effects of Inhaled Acetaldehyde and Propionaldehyde on Blood Pressure and Heart Rate 131

MINORU KASUYA. Effects of Inorganic, Aryl, Alkyl and Other Mercury Compounds on the Outgrowth of Cells and Fibers from Dorsal Root Ganglia in Tissue Culture .. 136

U. HACKENBERG. Chronic Ingestion by Rats of Standard Diet with Aluminium Phosphide 147

M. T. SMITH, J. A. THOMAS, C. G. SMITH, M. G. MAWHINNEY, AND J. W. LLOYD. Effects of DDT on Radioactive Uptake from Testosterone-1,2-^{3}H by Mouse Prostate Glands 159

SHORT COMMUNICATIONS

HANSPETER WITSCHI AND BERNARD SAINT-FRANCOIS. Enhanced Activity of Benzpyrene Hydroxylase in Rat Liver and Lung After Acute *Cannabis* Administration 165

ANNOUNCEMENT 169

NUMBER 2, OCTOBER 1972

KENNETH A. SUAREZ, GARY P. CARLSON, GEORGE C. FULLER, AND NELSON FAUSTO. Differential Acute Effects of Phenobarbital and 3-Methylcholanthrene Pretreatment on CCl_4-Induced Hepatotoxicity in Rats 171

E. H. HERMAN, R. M. MHATRE, V. S. WARAVDEKAR, AND I. P. LEE. Comparison of the Cardiovascular Actions of NSC-109,724 (Ifosfamide) and Cyclophosphamide 178

WESLEY G. CLARK, STEVE F. MONTOYA, JR., AND STANLEY D. POMARANTZ. Sites of Emetic Action of Sodium Salicylate in the Cat 191

SHELDON S. DIAMOND AND STUART D. SLEIGHT. Acute and Subchronic Methylmercury Toxicosis in the Rat 197

JAMES T. STEVENS, JOSEPH J. MCPHILLIPS, AND ROBERT E. STITZEL. In Vitro Enhancement of Aniline Metabolism by Paraoxon 208

HANS TJÄLVE. A Study of the Distribution and Teratogenicity of Nitrilotriacetic Acid (NTA) in Mice 216

G. A. NOLEN, E. V. BUEHLER, R. G. GEIL, AND E. I. GOLDENTHAL. Effects of Trisodium Nitrilotriacetate on Cadmium and Methyl Mercury Toxicity and Teratogenicity in Rats 222

G. A. NOLEN, R. L. BOHNE, AND E. V. BUEHLER. Effects of Trisodium Nitrilotriacetate, Trisodium Citrate and a Trisodium Nitrilotriacetate-Ferric Chloride Mixture on Cadmium and Methyl Mercury Toxicity and Teratogenesis in Rats 238

Environmental Health

Edited by P. WALTON PURDOM
Professor of Environmental Engineering and Director, Center for Urban Research and Environmental Studies Drexel University Philadelphia, Pennsylvania

This is one of the most comprehensive studies yet published on the relationship between health and environment. This relationship is defined as a three-part system of human activity, available life support and waste materials; all of which are affected by biological, chemical, physical, psychological, and sociological environmental factors. The book considers a number of approaches to the evaluation and control of these factors.

Each chapter provides a detailed discussion of a specific area of environmental concern. Topics covered include:

- insect- and rodent-borne diseases
- food preservation and contamination
- the quality and quantity of our water
- sources of air pollution and its effects on health and vegetation
- problems of solid-waste disposal
- principles of radioactivity and the effects of radiation from natural and man-made sources
- noise and temperature control in the occupational and residential environment
- occupational hazards such as pneumoconiosis and dermatosis
- accident prevention

'1971, 600 pp., $19.50

Information for Authors

Toxicology and Applied Pharmacology publishes papers containing original scientific research pertaining to alterations in tissue structure or function resulting from the administration of chemicals, drugs or natural products to animal or man. Short reviews of subjects of interest to toxicologists will be considered. Communications, Announcements and Letters to the Editor are discussed below.

Manuscripts are accepted for review with the understanding that the content has not been published previously and is not under consideration elsewhere. Further, it is understood that papers submitted will have received the appropriate clearance and approval necessary for publication prior to submission.

Submission of manuscripts. All manuscripts should be submitted to:

Gabriel L. Plaa
Department of Pharmacology
Université de Montréal
P.O. Box 6128
Montreal 101, Canada

Form of manuscript. Two complete copies of each manuscript, in English, should be submitted. However, papers in French or German can be considered for publication; authors should contact the Editor prior to submission. All manuscripts must be typewritten, double-spaced (including references) on one side of 8.5 × 11 in. white paper with 1 in. margins on all sides.

Page 1 should contain the article title, the names and affiliations of all authors, an abbreviated form of the title (not to exceed 40 characters including letters and spaces) and the name and complete mailing address of the person to whom all correspondence should be sent. The article title should be comprehensive and descriptive; proprietary names must not be used in titles, but may be identified in footnotes.

Page 2 should contain an abstract starting with the title of the paper, followed by the authors' names and reference to *Toxicology and Applied Pharmacology*; blanks should be left so that the Editor may fill in the volume and page numbers. The abstract will be limited to 250 words, but must contain a concise summary of what was done, the results obtained and valid conclusions which are drawn therefrom. It must mention the compounds or families of compounds studied, their actions and the species of animals. It must contain important words which are used as index terms, but not proprietary names.

Example: The 90-Dose LD50 and a Chronicity Factor as Measures of Toxicity. Hayes, Wayland, J., Jr. (1972). *Toxicol. Appl. Pharmacol.* 00, 00–00.

Format. The following text sections should be used.

Introduction. State why the investigation was carried out, note any relevant published work, and delineate the objectives of the investigation.

Methods. New methods or significant improvements of methods or changes in old methods must be described. Methods for which adequate reference can be cited are not to be described.

Results. Duplication between the text of this section and material presented in tables and figures should be avoided. Tabular presentation of masses of negative data must be avoided and replaced with a statement in the text whenever possible. The statement must include (a) what was done, (b) how it was done, (c) how the data were analyzed, (d) a measure of variability, and (e) the significance of the result.

Discussion. This section must relate the significance of the work to existing knowledge in the field and indicate the importance of the contribution of this study. Needless detailed recapitulation of the results must be avoided. Unsupported hypotheses and speculation should be omitted.

References. Names of authors are to be cited in the text with year of publication in parentheses. When there are more than two authors use the first author's name followed by et al. All papers mentioned in the text must be listed in the reference list and vice versa. References should be listed alphabetically typed double-spaced on a separate sheet at the end of the paper with all authors included. Journal titles should be abbreviated according to *Chemical Abstracts Service Source Index, 1969*. Note the following styles for references.

Dubnick, B. and Towne, C. E. (1972). Comparative metabolism of [2–^{14}C] mecloqualone in mice, rats, dogs and man. *Toxicol. Appl. Pharmacol.* **22**, 82–92.

Giebisch, G. (1971). Renal potassium excretion. In *The Kidney* (C. Rouiller and A. F. Muller, eds.), Vol. 3, pp. 329–382. Academic Press, New York.

Kuschinsky, G. and Lullmann, H. (1972). *Introduction to Modern Pharmacology*. Academic Press, New York.

Footnotes should be identified in the text by superscript Arabic numerals and cited consecutively throughout the paper. All footnotes should be listed in order typed double-spaced on a separate sheet. Proprietary names of substances and names and addresses of suppliers should be identified in footnotes. If the paper has been presented orally in whole or in part, the date, place and occasion should be included in a footnote.

Tables must be typed double-spaced on a separate sheet with the title typed directly above the table. Do not use abbreviations in the title. The title and footnotes must contain all the information necessary to understand and interpret the table without reference to the text. Tables must be numbered consecutively with Arabic numerals. Footnotes to tables should be identified by superscript lower case letters [a, b] etc. and placed at the bottom of the page containing the table.

Figures should be numbered consecutively with Arabic numerals. All legends are to be typed consecutively on a separate sheet. Lettering on the original figure should be large enough to be legible after a reduction of 50–60%. Graphs should be plotted with black India ink on white drawing paper no larger than 8.5 × 11 in. Grid lines that are to show must be inked in black. Photographs must be kept to a minimum; authors will be charged for halftone artwork exceeding three printed pages. Photographs should be glossy prints (5 × 7 or 8 × 10 in.).

High contrast micrographs not larger than 3.5 × 4.5 in. should be submitted in duplicate. This size will eliminate reduction. Electron micrographs should be submitted not larger than 6.5 × 4.5 in. Magnifications should be indicated in the legend.

Index terms suitable for use in the subject index must be submitted on a separate sheet. The list should include chemical name, generic name, common name and may include proprietary name of each important substance used in the experiments. It should also include biological activity of each substance investigated. Terms should elucidate important relationships.

Nomenclature. For styling of isotope, enzyme and biochemical nomenclature, consult the Information for Authors of the *Archives of Biochemistry and Biophysics*.

Abbreviations. Units will be in general accordance with the International System (SI) as adopted by the 11th General Conference on Weights and Measures. Periods are not used after abbreviations (note exceptions, e.g., in. for inches).

Common abbreviations to be used in this journal are:

m	meter	ppm	parts per million
cm	centimeter	cpm	counts per minute
mm	millimeter	dpm	disintegrations per minute
μm	micrometer	sc	subcutaneous
nm	nanometer	ic	intracutaneous
kg	kilogram	im	intramuscular
g	gram	ip	intraperitoneal
mg	milligram	iv	intravenous
μg	microgram	po	oral
ng	nanogram	LD50	median lethal dose
ml	milliliter	LC50	median lethal concentration
μl	microliter	Hz	hertz
mol	mole	°C	centigrade
M	molar	sec	seconds
mM	millimolar	min	minutes
μM	micromolar	hr	hours
N	normal	SD	Standard deviation
Ci	Curie	SE	Standard error

Reprints. A reprint order form will accompany galley proofs. Fifty reprints are supplied free of charge.

Communications. Toxicology and Applied Pharmacology will accept a limited number of brief reports of work that has progressed to the stage at which it is considered that the science of Toxicology would be advanced if the results were made available as soon as possible. These reports will be designated "Communications." Authors should submit short papers for this category of publication only when they believe that the rapid communication of their results is of the utmost importance to other investigators. The manuscript must be submitted in duplicate and conform strictly to the form and style of the journal. The length must be such that it will require no more than two pages in the present format of the journal.

Letters to the Editor. Letters to the editor will be accepted for publication subject to Editorial Board approval, provided that the content deals with papers published in Toxicology and Applied Pharmacology and that the comments are of scientific value. Letters should be received within two months of mailing of the journal and should be no longer than 250 words. Introduction of new data will not be permitted. Each letter will be submitted to the author of the original paper in order that any reply may be published simultaneously with the letter.

Announcements: Toxicology and Applied Pharmacology will accept for publication announcements of interest to toxicologists such as notices of society meetings, symposia or other matters.
